Product Description

Beestar European Electrical Bee Smoker Size M Electrical Bee Smoker For Beekeeping

- 1.The smoke transmitter is a tool for subduing bees by erupting smoke.
There are many kinds of fuel used in the smoke transmitter.
- 2.Any material that burns slowly and produces large amounts of non-toxic smoke to the bees can be used as fuel for the smoke pump (recommended smoke bombs, which do no harm to bees).
- 3.The smoke transmitter is also known as a smoke fumigation machine, used to subdue or drive bees.

- 4.The bees will suck up a lot of honey and occurs avoidance behavior. After abdomen filled with honey, the bee is not easy to Sting so that a bee sting so they become docile.
- 5.The smoke transmitter is composed of two main parts: a chimney and a bellows.
A chimney is made up of a combustion chamber, a stove railing, and a cylinder cover. When in use, the hay dead leaves lit into the combustion chamber, cover the cylinder, and then compress the bellows to let the smoke out.
- 6.Smoke transmitter is mainly used to inspect bee colonies, taking honey, merging bee colonies and attracting queen bees.

**Company profile:**
